

GUEST LECTURE / WORKSHOP PROPOSAL

Project-Based Web Development and AI-Assisted Coding

Prepared by: Hemant Kumar | Industry Mentor and Web Development Trainer

Industry Experience	Teaching Experience	Audience	Mode
7+ Years	3+ Years	B.Tech / BCA / MCA Students	Online / Offline

1. Speaker Profile

Hemant Kumar is a web development professional and mentor with 7+ years of industry experience and 3+ years of teaching experience. He focuses on practical, project-based learning that helps students move beyond syntax and understand how real websites are built, debugged, deployed, and improved using modern AI tools.

Core Positioning: Helping students become client-ready by learning real project handling, debugging, deployment, eCommerce website development, and AI-assisted coding workflows.

2. Objective of the Session

- Bridge the gap between academic programming knowledge and real-world web development work.
- Help students understand how professional developers approach client websites, debugging, deployment, and delivery.
- Introduce AI tools as productivity accelerators, not replacements for logic, problem-solving, and project ownership.
- Give students a practical roadmap to build portfolio-ready projects and improve employability.

3. Suggested Guest Lecture / Workshop Topics

Topic	What Students Will Learn
AI Tools for Web Developers	From code generation to debugging, deployment, and responsible AI-assisted development.
Why Students Get Stuck in Real Projects	Common gaps between syntax learning and actual client-ready website development.
Build Real Websites, Not Just Practice Pages	A practical roadmap for HTML, CSS, JavaScript, WordPress, Magento, and eCommerce projects.
Debugging Mindset for Beginners	How to read errors, isolate problems, test fixes, and avoid blind copy-paste coding.
Career Roadmap for Web Development Students	Skills, portfolio, projects, AI workflow, and interview-ready practical preparation.

4. Recommended Session Format

Duration	45 to 90 minutes for a guest lecture; 2 to 3 hours for a hands-on workshop.
Format	Interactive talk, live examples, Q&A, mini-demo, and practical roadmap for students.
Target Students	B.Tech, BCA, MCA, Diploma, and beginner-level web development learners.
Preferred Mode	Online or offline, based on college requirements and availability.

5. Sample 60-Minute Agenda

Time	Activity
0-5 min	Introduction: Why coding students struggle in real projects
5-20 min	Real project workflow: planning, building, debugging, deployment
20-35 min	AI-assisted coding: where ChatGPT helps and where developer logic is required
35-45 min	Debugging and deployment mindset with practical examples
45-55 min	Student roadmap: portfolio projects, skills, and next steps
55-60 min	Q&A and interaction

6. Expected Student Outcomes

- Students will understand why syntax alone is not enough for professional development work.
- Students will learn a clear approach to building, debugging, and deploying real web projects.
- Students will understand how to use AI tools without becoming dependent on copy-paste coding.
- Students will get a practical roadmap for portfolio building and skill improvement.

7. Why This Session Adds Value to Students

Most students learn programming concepts, but many struggle when they need to convert those concepts into a complete working website or client-ready project. This session is designed to give students a realistic view of web development work and help them build confidence in debugging, deployment, AI-assisted coding, and practical project execution.
